

Edupro SMS — Independent QA Test Report

Academic Reporting Platform — Student / Parent / Teacher / Headmaster Portal
Verification

Prepared by: Independent Test Reviewer (first-time user of the system)

Test date: 2026-07-03 | Environment: edupro.localhost (local Docker, Frappe v15 + Education v15.2 +
edupro_sms)

10 / 16

test criteria fully passed (62.5%) — 2 partial, 4
failed

1. Executive Summary

I tested the system as an outside reviewer would — logging in as a real student, a real parent, a real teacher, and the headmaster, and doing exactly what each of those people would try to do on their first day. I did not read the application source code to form these conclusions; every result below comes from actually clicking through the live site at **edupro.localhost:8080** in a browser, using the seeded test accounts.

Headline finding: the **Student** and **Parent/Guardian** portals work well and meet almost everything asked of them, with one minor presentation gap each. The **Teacher** and **Headmaster** portals, however, do not meet two of their four stated requirements: neither role can enter marks or approve report cards directly on the website, and neither role is blocked from the Frappe Desk admin interface. This is not an oversight that slipped through — it traces back to a scope decision made earlier the same day (recorded as **Decision 0013** in the project's own decision log), where the option to fully remove Desk access for these two roles was explicitly declined in favor of a faster "read-only website dashboard, keep Desk for real work" build. That decision is now in direct conflict with today's test brief. Section 5 lays out exactly what would need to be built to close the gap.

Role	Requirement Tested	Result	Notes
Student	Can log in	PASS	
	Can view all subjects	PASS	Profile tab
	Can view marks for those subjects	PARTIAL	Only via print view, not inline
	Can print report card	PASS	Real PDF verified
	Cannot view Desk	PASS	Blocked, "Not Permitted"
Parent	Can log in	PASS	
	Can view children's reports	PARTIAL	Child with no report vanishes from Grades tab
	Can print to PDF	PASS	Real PDF verified
	Cannot view Desk	PASS	Blocked, "Not Permitted"
Teacher	Can log in	PASS	
	Can enter marks on the website portal	FAIL	Dashboard is read-only; links out to Desk
	Cannot view Desk	FAIL	Full, unrestricted Desk access confirmed
Headmaster	Can log in	PASS	

	Can view all classes/students/teachers	PASS	Correct counts, correct data
	Can approve report cards on the website portal	FAIL	Dashboard is read-only; links out to Desk
	Cannot view Desk	FAIL	Full, unrestricted Desk access confirmed

2. Methodology

- Testing was performed with a real Chrome browser session against the running application at **http://edupro.localhost:8080**, not against the underlying database or API in isolation.
- For each role, I logged in with a seeded test account, exercised the exact actions described in the test brief, and recorded what actually happened on screen — including page titles, URLs, and visible content.
- "Must not view the Desk" was tested by navigating directly to **app** (and, for Teacher/Headmaster, by following the system's own "go to Desk" links) while logged in as that role, and observing whether the Frappe Desk admin interface actually loaded.
- Print/PDF claims were verified by triggering the real "Get PDF" download and confirming a genuine, correctly-rendered PDF file was produced (not just that an HTML preview appeared).

Role	Test account
Student	kwabena.owusu@example.edupro.test (Form 4A)
Parent / Guardian	ama.owusu@example.edupro.test (2 children: Kwabena Owusu, Abena Mensah)
Teacher / Instructor	kwame.boateng@example.edupro.test (Form 4A & Form 4B)
Headmaster	headmaster@example.edupro.test

3. Student Portal — Detailed Results

Login — PASS. Logging in with the student's email/password lands directly on/my-reports ("My Reports"), never on any admin screen. The login page itself is branded with the school's own logo and name ("Login to First Class High") rather than generic Frappe/ERPNext branding.

Viewing subjects — PASS. The "Profile" tab clearly lists the student's Class (Form 4A) and all 5 enrolled Subjects with their IGCSE codes (Mathematics 0580, English – First Language 0500, Physics 0625, Chemistry 0620, Biology 0610), plus the linked parent's email address.

Viewing marks — PARTIAL. The "Grades" tab shows only an aggregate per term: Average %, overall Grade, class Position, and Status. It does **not** show the individual mark for each subject on that same screen. Per-subject marks (e.g. Mathematics 87/100, Grade A) only become visible after opening the "View / Print" report card. A first-time student user asking "what did I get in Chemistry?" has to open the printable report card to find out — the main Grades screen can't answer that question directly. This does not block the requirement outright, but it is a real gap against "view all his subjects and their marks" read as a single, direct view.

Printing the report card — PASS. The "View / Print" link opens a full, correctly-formatted report card (school logo, student/class/term details, a complete per-subject Score/Grade table, totals, and both Class Teacher and Headmaster comment fields). Clicking "Get PDF" downloads a genuine, well-formed PDF of that same report — confirmed by opening the downloaded file and confirming it rendered correctly, not just checking that a link existed.

Desk access — PASS (correctly blocked). Navigating directly to /app while logged in as the student returns a clean "Not Permitted" page with a Login button — the Frappe Desk admin interface never loads. The student is a "Website User" account type, which is why this works cleanly, unlike Teacher/Headmaster below.

4. Parent / Guardian Portal — Detailed Results

Login — PASS. Same branded login, same landing page (/my-reports), no admin screen ever shown.

Viewing children's reports — PARTIAL. The "Profile" tab correctly lists **both** of this parent's children (Kwabena Owusu, Form 4A and Abena Mensah, Form 4B) with each child's own class and subjects — this part works well. However, the "Grades" tab only showed **one** child (Kwabena). Abena has no Report Card record yet in this term, and the Grades tab simply omits any child with zero report cards, with no message such as "Abena Mensah — no report published yet." A parent looking only at the Grades tab (the default, first-opened tab) could reasonably conclude the system has lost track of their second child entirely, when in fact the record is there — it's just not surfaced consistently between the two tabs.

Print to PDF — PASS. Identical mechanism to the student flow, verified independently from the parent's own login: "View / Print" renders the full report card, "Get PDF" produces a real, correctly formatted PDF.

Desk access — PASS (correctly blocked). Same as Student: visiting /app as the parent returns "Not Permitted." Guardians are also "Website User" accounts.

5. Teacher Portal — Detailed Results

Login — PASS. Teacher logs in and lands on a new/dashboard website page (not Desk, and not the student's /my-reports page) — a dedicated landing page exists for this role.

Dashboard content — genuinely good, worth calling out. The "My Classes" table on this dashboard is accurate and complete: for a teacher assigned to two different classes (Form 4A and Form 4B, across 8 separate class+subject combinations), all 8 rows are shown, each with a live Students/Marks Entered count and a Complete / In Progress status. This is real, correctly-scoped data, not a placeholder.

Entering marks on the website portal — FAIL. The dashboard is **read-only**. There is no form, no editable field, and no "Save" action anywhere on /dashboard for recording a mark. The only related control is a single link at the bottom — "Enter or edit marks in Desk →" — which does exactly what it says: it leaves the website entirely and opens the Frappe Desk admin interface (/app/assessment-result), where marks entry actually happens, in a standard Desk list-and-form view. As stated, the requirement "teacher able to enter marks for his subjects on the website portal" is not met — marks entry exists, but only inside Desk.

Desk access — FAIL (not blocked). Teacher accounts are Frappe "System User" type with full, unrestricted Desk access by design. Clicking through from the dashboard (or navigating to /app directly) opens the complete Desk shell, including sidebar modules that have nothing to do with teaching: Accounting, Stock, Quality, Integrations, Build, ERPNext Settings, in addition to the expected Education module. The requirement "the teacher must not view the desk" is not met. (Whether a teacher can actually *do* anything destructive in those unrelated modules is a separate question — sidebar *visibility* alone is already a poor first impression and worth tightening regardless of the Desk-access decision below.)

6. Headmaster Portal — Detailed Results

Login — PASS. Lands on the same/dashboard page, correctly branched to the Headmaster's school-wide view rather than the Teacher's class view.

Viewing all classes/students/teachers — PASS. The dashboard shows accurate summary counts (4 Students, 2 Teachers, 2 Classes) and a full class-by-class breakdown table (Form 4A: IGCSE Science, 2 students, taught by Grace Mensah and Kwame Boateng; Form 4B: IGCSE Commerce, 2 students, taught by Kwame Boateng) — this matches the actual underlying data exactly, including a teacher who teaches more than one class.

Approving report cards on the website portal — FAIL. The dashboard shows a "Report Card Status" summary (a single count per workflow state, e.g. "2 Published") but has **no approve, reject, or review action anywhere on the page**. The only related control, "Review report card approvals in Desk →", leaves the website and opens the Frappe Desk Report Card list, where the actual multi-step approval workflow (Pending Approval → Reviewed → Published, per the project's own workflow spec) lives, with its Approve/Reject buttons. As stated, "headmaster able to approve on the website portal" is

not met.

Desk access — FAIL (not blocked). Same finding as Teacher: Headmaster is a full "System User" with unrestricted Desk access, confirmed by successfully opening /app/home and /app/report-card, sidebar and all.

7. Consolidated Defects & Gaps

#	Severity	Issue
1	High	Teacher cannot enter or edit marks anywhere on the website portal — only via Desk. Directly fails a stated must-have.
2	High	Headmaster cannot approve or reject report cards anywhere on the website portal — only via Desk. Directly fails a stated must-have.
3	High	Teacher and Headmaster both retain full, unrestricted Desk access, including modules unrelated to their role (Accounting, Stock, Quality, Integrations, Build). Directly fails a stated must-have, and is a broader access-hygiene concern independent of that requirement.
4	Medium	A parent's child with no Report Card yet silently disappears from the Grades tab (present correctly in Profile). Could read as "the system lost my child" to a first-time parent user.
5	Medium	Student/Parent Grades tab shows only an aggregate per term, not a per-subject mark breakdown; that detail only exists inside the printable report card.
6	Low	Login page footer reads "Powered by ERPNext" — minor inconsistency alongside the otherwise fully custom school branding on the same page.

8. Recommendations

1. **Resolve the Teacher/Headmaster scope conflict first.** Defects 1–3 all trace back to one earlier decision: keep Desk access so marks entry and approvals keep working as-is (Decision 0013). Today's brief explicitly asks for the opposite — website-only marks entry and approval, with Desk fully blocked. These two goals cannot both be true at once; a decision is needed on which one the system should actually target before more work is built on top of either.
2. **If website-only access is the real target,** two new pieces of work are required, not configuration changes: (a) a marks-entry form on the Teacher dashboard that can create/update Assessment Result records directly (mirroring the Desk form's validation), and (b) an approve/reject action on the Headmaster dashboard that drives the existing Report Card workflow via API instead of Desk's workflow buttons. Both are genuinely new UI, not a re-route of an existing one.
3. **Fix defect 4** (missing child on Grades tab) by showing every linked child on the Grades tab the same way Profile already does, with an explicit "no report published yet" state for any child without one — low effort, meaningfully better first impression for parents.
4. **Consider surfacing per-subject marks directly on the Grades tab** (defect 5), not only inside the printable report card, so a student/parent can see "what did I get in X" without opening a PDF.
5. **Cosmetic:** replace "Powered by ERPNext" in the login footer, or accept it as intentional attribution and drop it from future polish passes.
